## Integration & Last Feature

Implement the integration of the P01 P02 P03, adding your chosen last feature for your team project. Key components should include following items according to the topic your team has chosen in the beginning of the semester:

1. **Connectivity:** your application is running in your cloud VPS. **(1point)**
2. **Data:** the system should allow user to add, select and display data from your db running remotely on the cloud. **(2points)**
3. **Cookies:** have the ability to seemingly collect data from user interacting with your front end UI/UX application. **(1point)**
4. **Security:** allow the user to register for a new account, or login and logout. **(1point)**
5. **Last feature:** Integrate everything adding one last feature of your choice: GPS, or Animation (Lottie), or Chart/Plot; **(2points)**
6. **Submission:** upload on D2L source code inside a zipped project folder, and a not zipped short video demo 10 minutes, and ppt presentation. **(3points)**

Note: adjust the subject to your team project topic.
